What's new in OIT

IT University Partnerships Program
October 2014

IT Security Seminar: Oct. 20, 2014, Baker Center 2nd floor

Is your personal online data secure enough? How easy is it for a hacker to guess your password?

What steps should you take when handling sensitive data? Would your department still be able to function in the wake of a major epidemic?

For answers to these and other IT security questions, attend Ohio University's free IT Security Seminar on Oct. 20, 2014 from 9:00 a.m. to 4:00 p.m. on the second floor of Baker University Center on the Athens campus.

Breakout sessions will start on the hour and will include topics during each segment for both technical and non-technical audiences.

Oct. 28 event highlights new Blackboard features coming in May

On Oct. 28, instructors will have an opportunity to preview new Blackboard features that will be a part of the university's May 2015 Blackboard upgrade.

These features include:
Student Preview - allows an instructor to see his or her course exactly as a student would see it, including the Grade Center, all without having to use a guest account
Anonymous grading - improved functionality
Delegated grading - new capability allows delegating grading responsibilities within a course
SafeAssign enhancements
-Updated Originality Report interface
-Integration with native Blackboard assignments - available as an option when creating an assignment - no longer a separate assignment type
-Inline grading of SafeAssign submissions
New interface - The new version of Blackboard will include changes to the way the main interface looks and feels.

—Sean O'Malley

Email: Faculty/staff upgrade pilot begins soon

Oct. 14, 2014 - Work continues to make free/busy times visible between Exchange and Catmail; employee migration testing will start in the next few weeks

OIT continues to work on making it possible for employees and graduate/medical students who are still on Exchange to see calendar availability on Catmail and vice versa. Full calendar sharing will not be available until later this semester.

Free/busy works across both systems for the following groups:

- Catmail web users
- Windows Outlook users

Free/busy visibility is not working for:

- Mac Outlook users
- Exchange web users

We will be testing a fix later this week that should make free/busy information visible for all users. Given our current progress, we will be able to start piloting employee upgrades near the end of October.

Temporary accounts for calendar management

The OIT Service Desk can create temporary Exchange guest accounts for graduate students who need to manage a shared departmental calendar or act as a delegate for a faculty or staff member. To request this service, call 740-593-1222 or submit a request online.
